jFancy

-\$1.00

jFancy for Joomla®: FancyUpload power gets into your Joomla installation.

FancyUpload is a file-input replacement which features an unobtrusive, multiple-file selection menu and queued upload with an animated progress bar. It is easy to setup, is server independent, completely styleable via CSS and XHTML and uses MooTools to work in all modern browsers.

jFancy is the powerful FancyUpload tool translated into a Joomla module for your image upload.

jFancy is provided as is. jFancy performs a trick to replace Joomla 1.1 mootools core script with the more recent and required 2.0 version. Please consider that some scripts or javascript could not be compatible with mootools 2.0 version and then could not work anymore with the same page where jFancy module is included.

v. 2.05 available (October-2014)

- Security server fix!

v. 2.03 available (18-April-2010)

- Chrome browser Fix;
- ext check improved.

v. 2.02 available (31-March-2010)

- Any type of upload file allowed depending on the extensions listed in module configuration.

Many thanks to "Miguel Becker" for the Spanish translation

jFancy is a Joomla 1.5 Module. GPL License.
jFancy requires PHP5.
